

fsi::modules::tc::convertFrom

main

FSI_temperatureConvertCelFrom

```
graph LR; A[fsi::modules::tc::convertFrom] --> C[FSI_temperatureConvertCelFrom]; B[main] --> C;
```

The diagram illustrates two function calls to a target function. On the left, there are two source boxes: 'fsi::modules::tc::convertFrom' at the top and 'main' below it. On the right is a larger, shaded box representing the target function, 'FSI_temperatureConvertCelFrom'. Two blue arrows originate from the source boxes and point towards the target box. The arrow from 'fsi::modules::tc::convertFrom' points to the top edge of the target box, while the arrow from 'main' points to its bottom edge.
